Unity Developer

Tangelo Games Israel is looking for a Unity Developer!

Our development team is multifunctional and fully responsible for developing and operating our games. You will join a team with a strong and healthy engineering culture. Our products are delivered to multiple platforms (Mobile, Web) and are multiplayer and highly concurrent.

As a Game Developer, you will be focused on delivering high quality games for our users, either in the social casino industry or others.

Responsibilities

- Developing a game on multiple platforms (iOS, Amazon, Facebook) using cutting edge technologies
- Optimizing the game for the best performance on all supported devices
- Implementing new client-side features as well as maintaining and improving existing code
- Establish effective strategy and development pipeline
- Design, build, and maintain efficient, reusable, and reliable code
- Identify process and application bottlenecks and bugs

Requirements

- 3+ years of experience programming in Unity
- Professional experience in software development
- Strong knowledge of C#
- Bachelor's degree in Computer Science or related or demonstrable work experience
- Native mobile development experience on Android / iOS (Java, Objective-C) - Advantage
- Comprehensive knowledge of application development for mobile devices (iOS and Android)
- Quick learner – Passionate, curious and inquisitive about technology
- A team player with a passion for gaming – An advantage
